SOLID COLOR

(ZY1)

Solid color paint (ZY1) is standard on all models. All painted areas of the cab, front end sheet metal, and box are the same color. Outlined block "Chevrolet" decal lettering is applied to the tailgate. (A bright trim plate with lettering is applied on Fleetside models when the Silverado trim is ordered). The only available Color Code 1/Color Code 2 exterior paint combinations are those displayed in the chart below. Recommended interior trim colors are indicated by the symbol ●. For more information, refer to Seats and Interior Trim pages as well as the Truck Order Guide.

SPECIAL TRAILERING PACKAGES

The charts below indicate the required and recommended options for towing light, medium or heavy trailers with your new C/K Full-Size Pickup. They also provide Regular Production Option numbers (RPOs) to make ordering easy for you.

As the charts show, a Heavy-Duty Special Trailering Package (RPO Z82) is recommended or required, depending on the C/K series and the size of the trailer to be towed. The package includes:

- A weight-distributing hitch platform.
- A 7-wire wiring harness.
- A transmission oil cooler (RPO V02).
- Heavy-duty front and rear shock absorbers (1500 Series only).
- An engine oil cooler (RPO KC4) for gasoline-powered models.

For towing a light trailer (up to 2000-lbs. gross weight), the optional rear step bumper is an appropriate deadweight hitch, and requires a 1⁷/₈"-diameter hitch ball, available as an accessory.

For towing a medium trailer (up to 4000-lbs. gross weight, or with a tongue

weight of 400-lbs. or under), a 2"- diameter hitch ball (also available as an accessory) is required for the C/K's rear step bumper.

For towing a heavy trailer (up to 10,000-lbs. gross weight), a weight-distributing hitch platform is required. It's included in RPO Z82—Heavy-Duty Trailering Special Package—or from an outside supplier. If you plan to "fifth wheel" a trailer with a gross weight of up to 13,500-lbs., please take special note of the following:

There are two types of pickup fifth-wheel hitch installations. The first has the fifth wheel on a bar mounted on brackets attached to the frame and the bed of the pickup and supported by braces on the fender housings.

Note: Diagonal bracing between the brackets is required. The kingpin is mounted on the trailer. With the second type, the kingpin is mounted in the bed of the pickup box, and the fifth wheel is mounted on the trailer. This type of hitch is supplied and installed by the trailer manufacturer.

Fifth-wheel trailers have a greater percentage of their weight on the kingpin (tongue load) than a conventional trailer. Because

of this fact, greater attention must be given to the maximum allowable payload and GVWR. The maximum allowable payload and GVWR for each application should not be exceeded. The weight of any additional equipment and all passengers must be subtracted from the payload weight to determine the available kingpin load.

You will also have to splice a wiring harness into your Pickup's special connector to activate your trailer lights and other electrical systems. A 5-wire wiring harness is sufficient for light trailers and can be purchased from an outside supplier. For medium and heavy trailers, a 7-wire wiring harness is required. It's included in RPO Z82 (Heavy-Duty Trailering Package) or can be purchased separately from an outside supplier. The heavy-duty 7-wire harness necessary for fifth-wheel trailering can be purchased from an outside supplier.

Although C/K Pickups can be purchased with manual transmissions for towing purposes, Chevrolet strongly endorses the 4-speed automatic transmission. The charts indicate trailering equipment required in **bold type**.

NOTE 1: Maximum Gross Combination Weight (GCWR) for fifth-wheel commercial trailering is 18,000-lbs. with gasoline engines and 15,000-lbs. with diesel engines.

NOTE 2: Model and driveline combinations must be verified by your local dealer for correct emissions equipment.

HOW TO USE GCWRs TO DETERMINE POWERTRAIN AND REAR AXLE RATIO FOR TRAILERING

Perhaps you prefer to use Gross Combination Weight Ratings (GCWRs) to determine the engine, transmission and rear axle ratio you will require to tow a trailer with your truck. The chart below allows you to do just that. It shows you the maximum allowable GCWR based on all the available truck engines and rear

axle ratios with automatic or manual transmissions. **The GCWR includes the total loaded weight of both the truck and trailer.** Any available engine may be used for trailering if the GCWR shown is not exceeded. The trailer weight can be increased by 25% if the vehicle speed will not exceed 25 mph.

GENERAL TRAILERING INFORMATION

AVAILABLE TRAILERING EQUIPMENT

Chevrolet offers a wide selection of available options for trailering and a few of them are described here.

LIGHT-DUTY TRAILER HITCH

For hauling trailers up to 2000-lbs. with a maximum tongue load of 200-lbs. A 1 7/8"-diameter ball is included. (Dealer-installed accessory. See chart for part numbers.)

HITCH BALLS

1 7/8"-diameter ball is standard with light-duty hitches. It is also available as an accessory: Part No. 981148. A 2"-diameter ball is also available for hitches as Part No. 980670.

LOAD-DISTRIBUTING PLATFORM

Required when towing trailers over 2000-lbs. Installs quickly and easily. (Dealer-installed accessory. See chart for part numbers.)

WIRING HARNESSES

5-wire used with trailers over 2000-lbs. gross weight and 7-wire for larger trailers. Harnesses tie into vehicle's electrical system to give your trailer lights, plus electric brakes or battery charging.

TRUCK WIRING CODE

The following color code for trucks should be used when installing trailer wiring harnesses.

- **Blue.** Used for electric trailer brakes or auxiliary wiring.
- **Red.** Used for battery charging. Connects to starter solenoid. (7-wire harness only).
- **Light Green.** Backup lights (7-wire harness only).
- **Brown.** Taillight and running lights.
- **Yellow.** Left stop and turn signal.
- **Dark Green.** Right stop and turn signal.
- **White.** Ground.

MIRRORS

Trucks used as tow vehicles will require outside mirrors with extensions that exceed the width of the trailer to be towed. Optional mirrors with larger mounting brackets are available with all truck models.

COOLERS AND COOLING

Trailering creates higher-than-normal temperatures in coolant, engine and transmission oil. To help control these temperatures, consider the following separate options.

RPO V02. This is an extra-capacity heavy-duty automatic transmission oil cooler option. (Included in RPO Z82 Special Trailering Package.)

RPO KC4. This optional engine oil cooler circulates oil through a separate cooler mounted ahead of the radiator. (Included in RPO Z82 Special Trailering Package.)

³ 1 7/8" ball for step-type bumper—Part No. 998392. 2" ball for step-bumper—Part No. 980670

NOTE: If the vehicle is equipped with a step bumper, the "V" shaped foot on the trailer tongue could dent the step bumper in a sharp turn. Before towing a trailer with a vehicle equipped with a step bumper, check the distance from the trailer foot front edge to the center of the couple ball socket. If this dimension is less than 12 inches, remove the foot on the trailer tongue or possible damage to the step bumper could occur.

SOLID COLOR

(ZY1)

WT 1500 WORK TRUCK

Solid color paint (ZY1) is standard on the WT 1500 Work Truck. All Painted areas of the cab, front end sheet metal, and box are the same color. The only available Color Code 1/Color Code 2 exterior paint combinations are those displayed in the chart below. Recommended interior trim colors are indicated by the symbol ●. For more information, refer to Seats and Interior Trim pages as well as the Truck Order Guide.

SPECIAL TWO-TONE

(ZY3)

Special two-tone (ZY3) paint colors are available only on Fleetside pickup models and include a multi-stripe decal applied over the paint break at the beltline. Color Code 1 is applied to the areas above the decal (including the cab roof). Color Code 2 is applied to the areas below. Outlined block "Chevrolet" decal lettering is applied to the tailgate. (A bright trim plate with lettering is applied on Fleetside models when the Silverado trim is ordered.) The only available Color Code 1/Color Code 2 exterior paint combinations are those displayed in the chart below. Recommended interior trim colors are indicated by the symbol ●. For more information, refer to Seats and Interior Trim pages as well as the Truck Order Guide.

Consumer Information

Truck – Camper Loading

CONSUMER INFORMATION REGULATION 575.103 issued by the National Highway Traffic Safety Administration requires manufacturers of trucks capable of accommodating slide-in camper bodies to provide information concerning proper load and proper load distribution in truck-camper applications.

This Consumer Information booklet is designed to provide basic information relating to load capabilities of 1991 General Motors Truck models which are adaptable to slide-in camper applications. Information contained herein is applicable to the truck buyer that already owns a 1991 General Motors Truck or the prospective truck purchaser.

The Regulation also provides that proper truck-camper loading information is to be maintained in truck dealerships and be made available to all prospects on request. This booklet relates to the 1991 General Motors Truck models recommended for slide-in camper applications and is to be used as a consumer information piece.

Product specifications or data contained herein may change periodically. When a revision of this booklet is supplied to truck dealers, it is the dealers' responsibility to make the revised information available to the public.

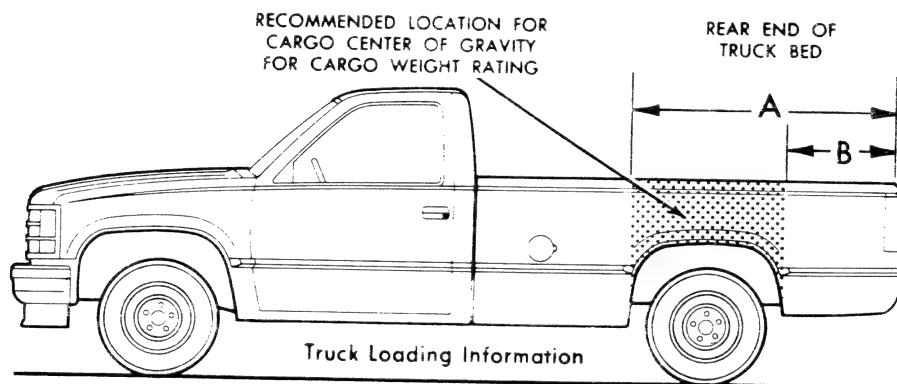

All illustrations and specifications contained in this literature are based on the latest product information available at the time of publication approval. The right is reserved to make changes at any time in prices, colors, materials, equipment, specifications and models, and also to discontinue models.

TRUCK – CAMPER LOADING

Consumer Information Regulation 575.103 requires manufacturers of trucks capable of accommodating slide-in campers to specify the vehicles' Cargo Weight Rating (CWR) and the longitudinal limits within which the center of gravity for the cargo weight rating should be located.

Cargo Weight Rating (CWR)—The cargo weight rating of a vehicle means the value specified by the vehicle manufacturer as the cargo-carrying capacity of a vehicle in pounds, exclusive of (minus) the weight of occupants, computed as 150 pounds times the number of designated seating positions.

Longitudinal Center of Gravity Zone for CWR (CG)—The forward limit of the recommended CG Zone is determined by the application of dimension "A" measured in inches from the rear of the truck bed. The rearward limit of the recommended CG Zone is established by application of dimension "B", also measured in inches from the rear of the truck bed. The recommended CG Zone lies between these points.

Model _____ Calculated Cargo Weight Rating _____

Dimension A _____ Dimension B _____

Limitations on Recommended CG Zones

FORWARD LIMIT

- (1) Must not extend beyond the inside surface of the pickup box.
- (2) Must not exceed the front gross axle weight rating (GAWR).

REARWARD LIMIT

- (1) Must be no farther rearward than the inside surface of the pickup box.
- (2) Must not exceed the gross axle weight rating (GAWR) on the rear axle.
- (3) Must not exceed rear axle load limits below:

Series	Rear Axle Load Limits (% of GVWR)
S/T-10/15	62%
C/K 1500	60%
C/K 2500	65%
C/K 2500/C6P, C/K 3500	70%
R/V 3500	70%

Vehicle (CG) Identification—All General Motors Corporation trucks that may be suitable for carrying a slide-in camper incorporate a Truck-Camper Loading information label located on the inside of the glove box door on C/K and R/V models, or on the trailing edge of the driver's door on S/T-10/15 models. The vehicle identification number (VIN), the as-manufactured cargo weight rating (CWR) of that vehicle plus the CG limits of dimension "A" and "B" for that vehicle in inches are included.

Vehicle and Truck-Camper Loading are also discussed at length in the first few pages of the Vehicle Owner's Manual.

TRUCK – CAMPER LOADING

Loading Instructions—When the truck is used to carry a slide-in camper, the total cargo load of the truck consists of the camper manufacturer's weight figure, the weight of installed additional camper equipment not included in the camper manufacturer's weight figure, the weight of camper cargo and the weight of passengers *in the camper*. The total cargo load should not exceed the truck's cargo weight rating (CWR) and the camper's center of gravity should fall within the truck's recommended center of gravity zone when installed.

Any accessories or other equipment added to this vehicle, after final date of manufacture, must be weighed or have their weight determined, and the weight deducted from the prescribed cargo weight rating (CWR) of this vehicle. This may decrease the permissible longitudinal zone of the center of gravity for this vehicle.

The longitudinal center of gravity zone has been determined for the full cargo weight rating of this truck. If a slide-in camper has a total weight less than the cargo weight rating (CWR), the permissible longitudinal zone of the center of gravity may be larger. However, individual axle loads should not exceed either of the gross axle weight ratings (GAWR).

Secure loose items to prevent weight shifts that could affect the balance of your vehicle. When the truck camper is loaded, drive to a scale and weigh the front and the rear separately to determine the axle loads. Individual axle loads should not exceed either of the gross axle weight ratings (GAWR). The total of the axle loads should not exceed the gross vehicle weight rating (GVWR). These ratings are given on the vehicle identification plate and on the vehicle certification label which are located on the left side of the vehicle, normally on the door latch post or door edge next to the driver. If weight ratings are exceeded, move or remove items to bring all weights below the ratings.

CAUTION: The longitudinal center of gravity is only one of the many factors which may affect the overall performance of a vehicle, including handling, steering and braking. The cargo load should be distributed on both sides of the centerline as equally as possible. The recommended, longitudinal limits for the camper's center of gravity are based on the assumption that the vehicle will be operated with reasonable prudence in light of all of the existing conditions. Failure to do so could result in unsatisfactory vehicle performance and could make the vehicle unsafe to operate.

In this connection, refer to any recommendations by the slide-in camper manufacturer regarding installation and loading of the camper.

TRUCK – CAMPER LOADING

DEFINITION OF TERMS

For the purposes of calculating Truck-Camper Loading in this book, listed below are some common terms and abbreviations:

Cargo Weight Rating (CWR)—means the value specified by the vehicle manufacturer as the cargo-carrying capacity of a vehicle in pounds, exclusive of (minus) the weight of occupants, computed as 150 pounds times the number of designated seating positions.

Center of Gravity (CG)—Point where the mass of a body is concentrated and if suspended at that point would balance front and rear.

Curb Weight—Weight of a vehicle without driver, passengers or cargo but including fuel, coolant and other items of standard equipment.

Dimension A & B—Front and rear limit of Center of Gravity (CG) zone.

Gross Vehicle Weight Rating or “GVWR” means the value specified by the manufacturer as the loaded weight of a single vehicle.

Gross Axle Weight Rating or “GAWR” means the value specified by the vehicle manufacturer as the load carrying capacity of a single axle system measured at the tire-ground interfaces.

Model Weight—Weight of the vehicle with all items of standard equipment, 150 pounds per passenger in each designated seating position and maximum capacity of fuel, oil and coolant.

Payload Rating—is the maximum allowable load (including the weight of the driver and all occupants) that the vehicle can carry based on all factory-installed equipment on the vehicle.

RPO—Regular Production Option.

Slide-in Camper—means a camper having a roof, floor, and sides, designed to be mounted on and removable from the cargo area of a truck by the user.

Weight Distribution—The amount of a vehicle’s weight that rests on each axle.

Wheelbase (WB)—The distance from the center line of the front axle to the center line of the rear axle.

LIMITATIONS

The following General Motors truck models are not recommended for slide-in camper applications:

- Any pickup model with a cargo weight rating (CWR) of less than 500 lbs. A statement to this effect is imprinted on the Truck-Camper Loading information label which states whether that vehicle is recommended for use with a slide-in camper.
- S-10/15 (2WD) Pickup with 4200 lb. GVWR.
- T-10/15 (4x4) Pickup with 4650 lb. GVWR.
- S/T-10/15 Pickup with 108.3” WB.
- S/T-10/15 Extended Cab Pickup.

Note: C/K 1500 Pickups should not be used for larger, cab-over-type slide-in campers.

INSTRUCTIONS FOR PROSPECTIVE TRUCK PURCHASERS **VEHICLE SELECTION AND WEIGHT ANALYSIS**

1. For S/T-10/15 Models.

You must order S/T 10803 (117.9" WB) model with one of the following GVWR Ratings:

S10803 (2WD) 4600 lb. GVWR

S10803 (2WD) 4900 lb. GVWR

T10803 (4x4) 5150 lb. GVWR

if you intend to use a slide-in camper on your S/T-10/15 Pickup. Record the model on page 3. Record the model GVWR, front GAWR, and rear GAWR on page 9. These ratings can be found in the S/T-10/15 section of the General Motors Light-Duty Truck Facts/Data Book on the Specifications pages.

For C/K, R/V Models.

From the model selection pages of the C/K or R/V Pickup section of the General Motors Light-Duty Truck Facts/Data Book, select the pickup model you desire. Record this information on page 3. Refer to the Specification pages for the selected model. Select the GVWR you require and note any minimum tire size and chassis equipment requirements for that GVWR. (To approximate the GVWR you require, add your loaded camper weight to the vehicle model weight shown on the appropriate weights page of the Facts/Data Book.) Record this GVWR and the Gross Axle Weight Rating (GAWR), Front and Rear (from the Specifications pages), on line 1 of the camper loading worksheet, page 7.

2. Record the front and rear model weights of your selected vehicle on line 2, page 7.
3. List all factory-installed options you desire, including any options required by your selected GVWR, with their front and rear weights on the Pickup camper loading worksheet on page 7.
4. Add the front and rear weights of vehicle model and options to arrive at the total front and rear weight of the vehicle. Follow the directions on page 7, lines 4 through 4C to arrive at the adjusted total vehicle weight.
5. Subtract the adjusted total vehicle weight from the GVWR to arrive at the cargo weight rating (CWR) of your truck ■. Record this information on page 3.
6. Proceed to page 11 and calculate the center of gravity location limits using front and rear GAWRs, cargo weight rating (CWR), and front and rear weight of truck as determined above. Record this information on page 3.

■ The addition of any dealer-installed or other accessories will reduce the cargo-carrying capacity by the weight of the equipment installed.

CALCULATIONS TO DETERMINE FORWARD (A) AND REARWARD (B) LOCATION OF CENTER OF GRAVITY FOR CARGO WEIGHT RATING

Calculations for Dimension A

$$A = \left\{ \frac{\text{Front GAWR} - 1.05 \times \text{Front Weight of Truck}}{\text{Cargo Weight Rating}} \right\} \times \text{W.B.} + C$$

Enter Front GAWR.....

Subtract Front Weight of Truck $\times 1.05$ - (.....)

Answer

Divide Answer by Cargo Weight Rating (CWR)..... \div

Answer

Multiply Answer by Wheelbase \times

(See Chart on Page 10)

Answer

Add C Dimension to Answer + C

(See Chart on Page 10)

Dimension A =

Note: If "A" is greater than pickup box length, use box length for "A" dimension.

Calculations for Dimension B

$$B = \left\{ 1 - \frac{\text{Rear GAWR} - 1.1 \times \text{Rear Weight of Truck}}{\text{Cargo Weight Rating}} \right\} \times \text{W.B.} + C$$

Enter Rear GAWR.....

Subtract Rear Weight of Truck $\times 1.1$ - (.....)

Answer

Divide Answer by Cargo Weight Rating (CWR)..... \div

Answer

Subtract Answer from 1.000- - (.....)

Multiply Answer by Wheelbase \times

Answer

Add C Dimension to Answer + C

Dimension B =

Note: If "B" dimension is negative, use 0 (zero) for "B" dimension.

If "B" dimension is greater than "A" dimension, camper usage is not recommended at the Calculated Cargo Weight Rating. Camper usage may be possible for a lighter camper. Substitute known specific camper weight (less than Cargo Weight Rating) for Cargo Weight Rating in calculations above to determine "A" to "B" range for that specific camper.

Record dimension A and B on page 3.

SOLID COLOR

(ZY1)

Solid color paint (ZY1) is standard on all models. All painted areas of the cab, front end sheet metal, and box are the same color. Outlined block "Chevrolet" decal lettering is applied to the tailgate. (A bright trim plate with lettering is applied on Fleetside models when the Silverado trim is ordered). The only available Color Code 1/Color Code 2 exterior paint combinations are those displayed in the chart below. Recommended interior trim colors are indicated by the symbol ●. For more information, refer to Seats and Interior Trim pages as well as the Truck Order Guide.

SPECIAL TRAILERING PACKAGES

The charts below indicate the required and recommended options for towing light, medium or heavy trailers with your new C/K Full-Size Pickup. They also provide Regular Production Option numbers (RPOs) to make ordering easy for you.

As the charts show, a Heavy-Duty Special Trailing Package (RPO Z82) is recommended or required, depending on the C/K series and the size of the trailer to be towed. The package includes:

- A weight-distributing hitch platform.
- A 7-wire wiring harness.
- A transmission oil cooler (RPO V02).
- Heavy-duty front and rear shock absorbers (1500 Series only).
- An engine oil cooler (RPO KC4) for gasoline-powered models.

For towing a light trailer (up to 2000-lbs. gross weight), the optional rear step bumper is an appropriate deadweight hitch, and requires a 1 $\frac{7}{8}$ "-diameter hitch ball, available as an accessory.

For towing a medium trailer (up to 4000-lbs. gross weight, or with a tongue

weight of 400-lbs. or under), a 2"- diameter hitch ball (also available as an accessory) is required for the C/K's rear step bumper.

For towing a heavy trailer (up to 10,000-lbs. gross weight), a weight-distributing hitch platform is required. It's included in RPO Z82—Heavy-Duty Trailing Special Package—or from an outside supplier. If you plan to "fifth wheel" a trailer with a gross weight of up to 13,500-lbs., please take special note of the following:

There are two types of pickup fifth-wheel hitch installations. The first has the fifth wheel on a bar mounted on brackets attached to the frame and the bed of the pickup and supported by braces on the fender housings.

Note: Diagonal bracing between the brackets is required. The kingpin is mounted on the trailer. With the second type, the kingpin is mounted in the bed of the pickup box, and the fifth wheel is mounted on the trailer. This type of hitch is supplied and installed by the trailer manufacturer.

Fifth-wheel trailers have a greater percentage of their weight on the kingpin (tongue load) than a conventional trailer. Because

of this fact, greater attention must be given to the maximum allowable payload and GVWR. The maximum allowable payload and GVWR for each application should not be exceeded. The weight of any additional equipment and all passengers must be subtracted from the payload weight to determine the available kingpin load.

You will also have to splice a wiring harness into your Pickup's special connector to activate your trailer lights and other electrical systems. A 5-wire wiring harness is sufficient for light trailers and can be purchased from an outside supplier. For medium and heavy trailers, a 7-wire wiring harness is required. It's included in RPO Z82 (Heavy-Duty Trailing Package) or can be purchased separately from an outside supplier. The heavy-duty 7-wire harness necessary for fifth-wheel trailing can be purchased from an outside supplier.

Although C/K Pickups can be purchased with manual transmissions for towing purposes, Chevrolet strongly endorses the 4-speed automatic transmission. The charts indicate trailing equipment required in **bold type**.

SPECIAL TWO-TONE

(ZY3)

Special two-tone (ZY3) paint colors are available only on Fleetside pickup models and include a multi-stripe decal applied over the paint break at the beltline. Color Code 1 is applied to the areas above the decal (including the cab roof). Color Code 2 is applied to the areas below. Outlined block "Chevrolet" decal lettering is applied to the tailgate. (A bright trim plate with lettering is applied on Fleetside models when the Silverado trim is ordered.) The only available Color Code 1/Color Code 2 exterior paint combinations are those displayed in the chart below. Recommended interior trim colors are indicated by the symbol •. For more information, refer to Seats and Interior Trim pages as well as the Truck Order Guide.

HOW TO USE GCWRs TO DETERMINE POWERTRAIN AND REAR AXLE RATIO FOR TRAILERING

Perhaps you prefer to use Gross Combination Weight Ratings (GCWRs) to determine the engine, transmission and rear axle ratio you will require to tow a trailer with your truck. The chart below allows you to do just that. It shows you the maximum allowable GCWR based on all the available truck engines and rear

axle ratios with automatic or manual transmissions. **The GCWR includes the total loaded weight of both the truck and trailer.** Any available engine may be used for trailering if the GCWR shown is not exceeded. The trailer weight can be increased by 25% if the vehicle speed will not exceed 25 mph.

GENERAL TRAILERING INFORMATION

AVAILABLE TRAILERING EQUIPMENT

Chevrolet offers a wide selection of available options for trailering and a few of them are described here.

LIGHT-DUTY TRAILER HITCH

For hauling trailers up to 2000-lbs. with a maximum tongue load of 200-lbs. A 1 7/8"-diameter ball is included. (Dealer-installed accessory. See chart for part numbers.)

HITCH BALLS

1 7/8"-diameter ball is standard with light-duty hitches. It is also available as an accessory: Part No. 981148. A 2"-diameter ball is also available for hitches as Part No. 980670.

LOAD-DISTRIBUTING PLATFORM

Required when towing trailers over 2000-lbs. Installs quickly and easily. (Dealer-installed accessory. See chart for part numbers.)

WIRING HARNESSES

5-wire used with trailers over 2000-lbs. gross weight and 7-wire for larger trailers. Harnesses tie into vehicle's electrical system to give your trailer lights, plus electric brakes or battery charging.

TRUCK WIRING CODE

The following color code for trucks should be used when installing trailer wiring harnesses.

- **Blue.** Used for electric trailer brakes or auxiliary wiring.
- **Red.** Used for battery charging. Connects to starter solenoid. (7-wire harness only).
- **Light Green.** Backup lights (7-wire harness only).
- **Brown.** Taillight and running lights.
- **Yellow.** Left stop and turn signal.
- **Dark Green.** Right stop and turn signal.
- **White.** Ground.

MIRRORS

Trucks used as tow vehicles will require outside mirrors with extensions that exceed the width of the trailer to be towed. Optional mirrors with larger mounting brackets are available with all truck models.

COOLERS AND COOLING

Trailering creates higher-than-normal temperatures in coolant, engine and transmission oil. To help control these temperatures, consider the following separate options.

RPO V02. This is an extra-capacity heavy-duty automatic transmission oil cooler option. (Included in RPO Z82 Special Trailering Package.)

RPO KC4. This optional engine oil cooler circulates oil through a separate cooler mounted ahead of the radiator. (Included in RPO Z82 Special Trailering Package.)

¹ Deadweight hitch includes 1 7/8" ball. ² Requires a rear bumper. Not available with underframe space tire carrier.

³ 1 7/8" ball for step-type bumper—Part No. 998392. 2" ball for step-bumper—Part No. 980670

NOTE: If the vehicle is equipped with a step bumper, the "V" shaped foot on the trailer tongue could dent the step bumper in a sharp turn. Before towing a trailer with a vehicle equipped with a step bumper, check the distance from the trailer foot front edge to the center of the couple ball socket. If this dimension is less than 12 inches, remove the foot on the trailer tongue or possible damage to the step bumper could occur.
